

# Vencobelt

Egg conveyor belt with plastic egg carriers

## Some typical advantages of the Vencobelt:

- Egg friendly system, low percentage cracks
- Well combinable with packers
- Aluminium frame and plastic egg carriers
- Small radius at curves
- Adjustable to different heights
- Inclining/declining until 30 degrees

By the Vencobelt egg conveyor system, a cautious transport of the egg is guaranteed. A smart system optimises the transition of the eggs. The design of the egg carriers realizes a 0–30 degrees inclining/declining conveyor belt.

The system is operating by means of one single chain in the middle. Plastic egg carriers are mounted on the chain. This construction makes it possible to make curves in a very small radius.

## Technical specification

<b>Dimensions</b> – Width – Height	400 mm (00") 170 mm (00")
<b>Max. capacity</b>	26.000 eggs/hour
<b>Belt speed</b>	4 m/min.
<b>Max. length per drive unit</b>	100 m
